LeetCode

OBJECTIVE

B.Tech Computer Engineering (AI) student specializing in Artificial Intelligence and Machine Learning with strong interest in Data Science. Skilled in Python, Machine Learning, Deep Learning, and DSA. Currently exploring NLP, Transformers, and LLMs while learning Web Development. Actively seeking opportunities to apply my skills and grow in a dynamic environment.

EDUCATION

Zakir Husain College of Engineering and Technology, AMU

B.Tech Computer Engineering (AI) CGPA: 8.48

Expected 2026

Aligarh, India

Bishop Conrad Sr. Sec. School

Senior Secondary School Certificate 84.6%

Bareilly, India

TECHNICAL SKILLS

Languages: Python, C, C++, Java

ML/AI: Machine Learning, Deep Learning, Natural Language Processing, Computer Vision

Frameworks: PyTorch, TensorFlow, Keras, Scikit-learn, Flask, NLTK, BERT, Mlops

Databases: MySQL, PostgreSQL, MongoDB

Tools: Git, MS Word, MS Excel, AI Tools, Mlflow, AWS, GCP, Bigquery

PROJECTS

Disease Prediction using BioBERT + LLM-based Clinical Guidance

May 2025

Python, PyTorch, BioBERT, Flask, RAG

- Built an AI assistant to predict diseases from conversational symptom queries using BioBERT.
- Integrated Retrieval-Augmented Generation (RAG) with LLMs for evidence-based precautions and treatments.
- Created a medical knowledge base using WHO, ICMR, and PubMed sources.
- [GitHub Repository](#)

CNN-Based Brain Tumor Classification using MRI Images Dataset

July 2025

PyTorch, Inception-v4, EfficientNet, Xception

- Trained multiple CNN architectures for multi-class brain tumor classification.
- Built an end-to-end training pipeline with data preprocessing, augmentation, stratified dataset splitting, and evaluation using accuracy, precision, recall, and F1-score.
- Assisted early diagnosis by identifying tumor presence and severity.
- [GitHub Repository](#)

Sepsis Mortality Risk Prediction using MIMIC-IV V2.2 Dataset

Aug 2025 – Present

SQL, XGBoost, Random Forest, ML Pipelines, MLflow

- Developed an end-to-end ML pipeline to predict ICU sepsis mortality using MIMIC-IV data.
- Extracted and engineered clinical features (vitals, labs, SOFA) using SQL and Python.
- Trained and compared multiple models with MLflow tracking and model registry.
- Best-performing model Random Forest achieved 85% training accuracy and 83% testing accuracy.
- Evaluated performance using ROC-AUC, F1-score, precision-recall, and calibration metrics.
- [GitHub Repository](#)

CERTIFICATIONS

- Machine Learning A-Z: AI, Python (Udemy, 2025)
- Mastering Data Structures & Algorithms — Abdul Bari
- Deep Learning (CS7015) — IIT Madras
